PROFESSIONAL SUMMARY

Senior Software Engineer with 8+ years building full-stack web, mobile and SaaS products with C# / .NET, Angular, React and Node.js on Azure and AWS cloud platforms. Most recently built a multi-tenant order-management SaaS for retail brands (Shopify, ERP and POS integrations, CI/CD) and AI / LLM features: an agentic tool-calling assistant on Azure OpenAI and a RAG support chatbot. Works remotely with companies in the US, Denmark and the UK.

TECHNICAL SKILLS

Languages: C#, TypeScript, JavaScript, SQL, PowerShell

Backend: .NET 8 / .NET Core, ASP.NET Core, ASP.NET Web API / MVC, Entity Framework Core, Node.js, NestJS, Express.js, REST APIs (RESTful), GraphQL, microservices, RabbitMQ, BullMQ, WebSockets (Socket.IO), webhooks, JWT authentication, role-based access control

Frontend: Angular (v21: standalone components, signals, RxJS), AngularJS, React, Next.js, Vue.js, PrimeNG, Tailwind CSS

AI & LLM: Azure OpenAI / Azure AI Foundry, OpenAI API, Anthropic Claude API, Google Gemini API, agentic LLM tool / function calling, RAG (Retrieval-Augmented Generation), embeddings, vector databases (Qdrant, pgvector), prompt engineering, guardrails

Cloud & DevOps: Azure Functions, Azure Service Bus, Azure Blob Storage, Azure SQL Database, Azure Virtual Machines, AWS (EC2, ECS / Fargate, Lambda, RDS, S3, SQS, CloudFront), Docker containerization, Nginx, IIS, CI/CD, Azure DevOps Pipelines, GitHub Actions, GitLab CI, Git

Data: SQL Server, PostgreSQL, MySQL / MariaDB, MongoDB, Redis, Prisma, TypeORM, stored procedures, query optimization, data modeling, database migrations

Mobile: React Native, Expo, Flutter, offline-first sync

Practices: system design, multi-tenant SaaS architecture, scalability and performance optimization, third-party API integrations, automated testing (NUnit, Vitest), code reviews, Agile/Scrum, AI-assisted development (Claude Code, GitHub Copilot, Cursor)

PROFESSIONAL EXPERIENCE

Senior Software Engineer Feb 2025 – Sep 2026

MX Data (retail order-management SaaS, New York, USA) | Remote

- Designed and built an LLM assistant that answers warehouse and customer-service questions about live orders, using Azure OpenAI / Azure AI Foundry with agentic tool calling over typed, role-scoped tools.
- Implemented the assistant backend in C# and ASP.NET Core 8 with SSE streaming, grounding verification against retrieved data, token budgeting, per-user rate limiting and PII-redacted audit logging.
- Led the greenfield rewrite of a legacy AngularJS 1.3 fulfillment app to Angular 21, PrimeNG and Tailwind CSS, spanning 11 feature modules and 550 automated Vitest tests.
- Removed a Shopify rate-limit bottleneck by batching per-order REST reads into GraphQL, cutting API calls per 40-order cycle from 46 to 14 (70%) so order and inventory sync jobs could scale.
- Migrated CI/CD from Jenkins to Azure DevOps Pipelines: 6 YAML pipelines for MSI packaging, per-tenant artifacts and automated IIS deployments, plus security hardening of the release path.
- Owned third-party API integrations across 10+ external systems (Shopify REST and GraphQL, webhooks, EDI X12, ERP/POS) for a multi-tenant .NET 8 SaaS platform serving 10+ retail brands.
- Integrated third-party RabbitMQ message queues and used RabbitMQ as the message broker between core jobs in a microservices setup, alongside Azure cloud services (Functions, Service Bus, Blob Storage).
- Authored the system design and architecture decision record for the next-generation multi-tenant platform: canonical data model, per-tenant database isolation and hash-based change detection.
- Caught release-blocking defects in structured code reviews within an Agile/Scrum team, including a regression that would have cleared external product IDs across all tenants.

Full-Stack Software Engineer (Freelance) Sep 2018 – Jan 2025

Self-Employed | Remote

- Impactify World (NGO crypto donations): built a multi-tenant Vue.js, NestJS and MySQL platform with Coinify API payments, KYC and GDPR controls, and BullMQ and Redis queues for payment and webhook processing.
- Renuw (renewable energy traceability): engineered React and TypeScript portals for corporate customers and utilities with time-matching dashboards, Mapbox GL asset maps and Scope 2 reporting.
- ShoowMe (live commerce): developed seller streams, live chat, cart and checkout with React, Express.js, Socket.IO and ZegoCloud, plus NinjaVan OAuth, waybill and tracking integrations.
- Taxi Management (fleet operations): created an offline-first React Native / Expo driver app with WatermelonDB sync, a NestJS and MongoDB backend and React admin dashboards.
- Freight and load management platform: implemented real-time load tracking, automated driver pay and logging with Angular, NestJS/Node.js, TypeORM, MariaDB and Socket.IO.
- UK workplace-safety wearables platform: developed real-time workforce monitoring with Angular, NestJS, MongoDB and Socket.IO.
- Deployed client and own-product applications on AWS cloud (EC2, ECS / Fargate, RDS, S3, CloudFront) using Docker containers, Nginx and CI/CD pipelines in GitHub Actions and GitLab CI.

Full-Stack Developer Jan 2020 – Jan 2022

Health Information and Service Delivery Unit (HISDU), Government of Punjab | Lahore, Pakistan

- Delivered four province-level public-health systems (Medicine Inventory, Polio Monitoring, TB Control, COVID Vaccination) with ASP.NET Core, ASP.NET Web API / MVC, Entity Framework, Angular and SQL Server.
- Secured APIs with JWT authentication and claims-based role access, and built the reporting layer with SQL Server stored procedures, views and pivot reports.
- Produced COVID vaccination-center and stock workflows with ag-Grid data views supporting millions of patient records.
- Supervised two developers and contributed Flutter mobile features including chat, payment gateways, Google Maps and push notifications.

PROJECTS

BarqReply | RAG support chatbot for websites (own product) 2025 – 2026

- Engineered a RAG (Retrieval-Augmented Generation) support chatbot for websites using the OpenAI API and embeddings, a self-hosted Qdrant vector database and PostgreSQL.

BarqBooks | accounting web application (own product)

- Created accounting workflows covering chart of accounts, ledgers, invoices, bills and reconciliation with Next.js, NestJS and PostgreSQL, plus Google sign-in and role-based permissions.

EDUCATION

Associate Degree in Information Technology 2016 – 2018

Government College Township (GCT), Lahore, Pakistan
